GAMING

Gaming Security Assessment

Security testing for casino, iGaming and sportsbook operators and suppliers, and for console, PC and mobile games — never on live wagering, matches or players without written agreement.

ANTI-CHEAT & DRIVERS

What we assess

Gambling platforms

Wallets, KYC, geolocation, bonuses, bet acceptance, settlement, game aggregation, payment integrations and responsible-gambling controls.

Game clients & economies

Clients, launchers, updaters and anti-cheat drivers on lab machines; account takeover, trading, virtual currency and marketplaces.

AI, support & player safety

AI characters, moderation and support agents; help-desk and vendor recovery paths; privacy and safety protections for children.

What you get

- ✓ Value path traced from deposit to withdrawal or trade
- ✓ Testing of the kind Michigan and GLI-19 describe
- ✓ Evidence for your regulator, assessor, auditor or lab
- ✓ Rated on player harm, money, integrity, regulator exposure
- ✓ Client-side bypasses kept apart from real boundary breaches
- ✓ Money, wagering and player-safety issues escalated at once
- ✓ Retest on a named build, noting any re-certification

How it works

1. Scope obligations, evidence users and any tester approval
2. Agree test accounts, vendor authorisations and exclusions
3. Test platforms, clients, economies and AI; staging first
4. Escalate urgent issues; deliver findings and evidence; retest

A good fit if

- ✓ You operate a casino, iGaming or sportsbook platform facing an annual or pre-launch security assessment.
- ✓ You supply platforms, games or odds to licensed operators and carry security obligations of your own.
- ✓ You publish console, PC or mobile games with accounts, launchers, anti-cheat or economies to protect.
- ✓ Your game has AI characters or support agents, or young players whose protections need testing.

Probably not, if

- ✗ You need lab certification, an ISO 27001 audit or review, or a Nevada attestation — we test; others conclude.
- ✗ You want live play tested without written agreement, or console networks or app stores tested on your say-so.
- ✗ You run a state or government lottery — public-sector gaming is outside our scope.

How we engage

Fixed scope
A fixed-scope proposal at a fixed price. No hourly meter running.

Senior-led
The practitioner who scopes the work does the work and writes the report.

Plain language
One report your engineers and your board can both act on.

Live play protected
No live wagering, matches or real players until safeguards are agreed in writing.

Security that locks down risk, not your business. · © 2026 verrou
