VULNERABILITY SCANNING

Vulnerability Scanning

Monthly scans of your web apps, APIs, mobile apps, networks and cloud, with every finding checked by a practitioner. Part of every penetration test, and available on its own.

Monthly
NEW · FIXED · STILL OPEN

Reviewed
NO RAW SCANNER OUTPUT

EXPLOIT-AWARE PRIORITY

Senior
PRACTITIONER-LED

What we assess

Web apps, APIs & mobile
Running web apps and APIs, signed in with test accounts you provide, and the Android and iOS builds you supply.

Networks, external & internal
External services, DNS, TLS and HTTP headers; internal hosts inventoried over authenticated SSH, Windows via OpenSSH.

Cloud environments
Configuration via a read-only role you create, plus public endpoints, kept to the services provider testing rules allow; gaps reported.

What you get

- ✓ A baseline in month one, then a report every month
- ✓ What is new, fixed and still open; what was not scanned
- ✓ Urgent findings sent the day we confirm them
- ✓ Severity for your context, beside the CVSS base score
- ✓ CISA KEV and EPSS used to rank what to fix first
- ✓ A concrete fix for every finding, not a generic advisory
- ✓ Dated evidence an auditor, QSA or assessor can review

How it works

1. Agree scope, scan windows, rate limits and authorisation
2. Run month one as your baseline; review every finding
3. Scan monthly; urgent findings do not wait for the report
4. Report new, fixed and still open; rescan urgent fixes

A good fit if

- ✓ You test once a year, but your apps, APIs and cloud change every week.
- ✓ You have a scanner, but nobody has time to sort its real findings from the noise.
- ✓ You keep scan evidence for your assessor under PCI DSS 11.3.1 internal scans or NCSC CAF B4.
- ✓ You want a monthly record of what is new, fixed and still open, and what to fix first.

Probably not, if

- × You need PCI ASV scans or weekly DORA scans for critical or important functions — we offer neither.
- × You want weaknesses exploited and chained — that is a penetration test, not a scan.
- × You want a certificate or attestation — our reports are test evidence an assessor can review.

How we engage

Monthly report
Month one sets the baseline; each report after shows what is new, fixed and still open.

Senior-led
The practitioner who scopes the work does the work and writes the report.

Reviewed, not raw
A practitioner checks every finding: false positives out, severity adjusted, a fix given.

Scan safety
Written authorisation, agreed windows and rate limits, and no denial-of-service checks.

Security that locks down risk, not your business. · © 2026 verrou
